O crânio é composto por 22 ossos, divididos em neurocrânio (8 ossos que envolvem o cérebro) e esqueleto facial (14 ossos que formam a face). O neurocrânio inclui o frontal, os dois parietais, os dois temporais, o occipital, o esfenóide e o etmoide. O esqueleto facial inclui a maxila, a mandíbula, os zigomáticos, os ossos nasais, os lacrimais, os palatinos e o vômer

Coluna Vertebral

Vértebras: Diferenças

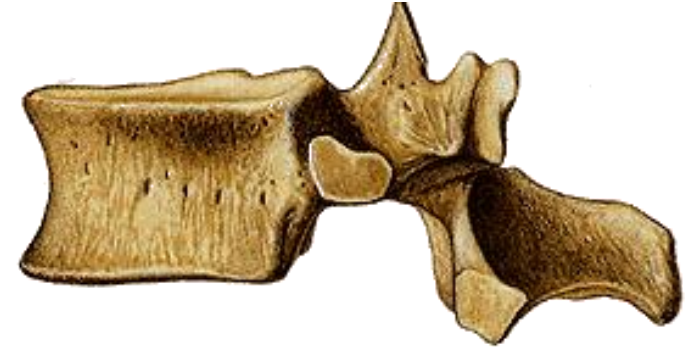

Cervical

Corpo pequeno
Forame transverso
Processo espinhoso
bifurcado

Torácica

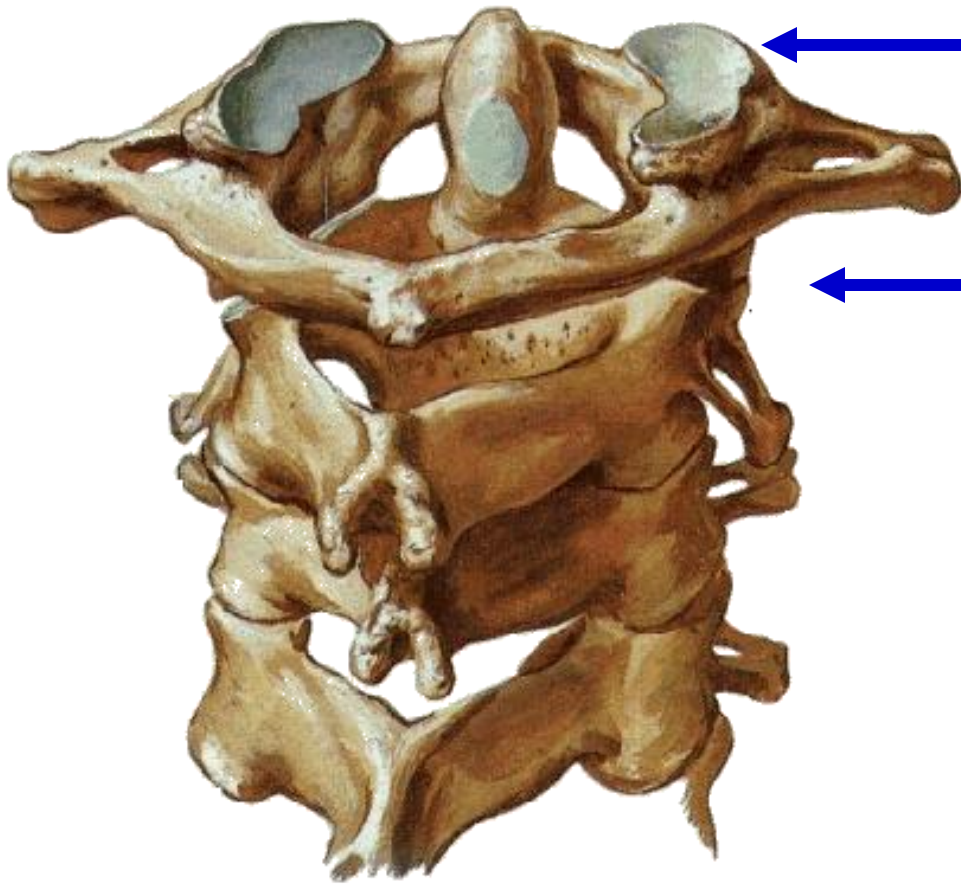

Corpo médio
Fóveas costais
Processo espinhoso
pontiado

Lombar

Corpo grande
Processo espinhoso
quadrangular
